## CONFIGURING CUSTOM FIORI LAUNCHPAD IN FES

CONFIGURING EXTERNAL ALIAS FOR FLP (FES)

After activating the SICF service for the launchpad with cache buster, you can create an external alias for the default URL of the launchpad. This enables your users to use the same URL.

Alternatively, you can make the launchpad available under a short URL of your choice within your domain.

STEPS FOR CONFIGURATION
1. Start transaction SICF
2. Select hierarchy type SERVICE, then choose
3. Choose External Aliases
4. Select DEFAULT_HOST and right click to create an external host
5. In the External Alias field, enter the alias under which you want the launchpad to be available. Enter an alias of your choice, for example: /fiori
6. On the Trg Element tab, select the following target handler: /sap/bc/ui2/flp

Maintain external aliases

🔍 📑

🔒 External Alias   /fiori

Trg Element: /default_host/sap/bc/ui2/flp

Description	
Description 1	SAP Fiori
Description 2	
Description 3	

Service Data	Logon Data	**Trg Element**	Error Pages	Administration

Select target handler by double-clicking:
