### 4. ACTIVATE SAP GATEWAY

Before you can use SAP Gateway functionality, you have to activate it globally in your FES system. You can activate and deactivate SAP Gateway. When you deactivate it, all SAP Gateway services stop running, no consumer servers can communicate with it, and an error message is sent to any system that calls for the services

Your have multiple options to activate SAP Gateway in an SAP system:

- In the customizing (transaction SPRO), choose SAP NetWeaver → UI Technologies → SAP Fiori → Initial Setup → Connection Settings (Front-End Server to ABAP Back-End Server) → Activate SAP Gateway

- Start transaction **/IWFND/IWF_ACTIVATE.**

- Alternatively, you can use the task list SAP_GATEWAY_BASIC_CONFIG to perform basic SAP Gateway settings, including the activation.
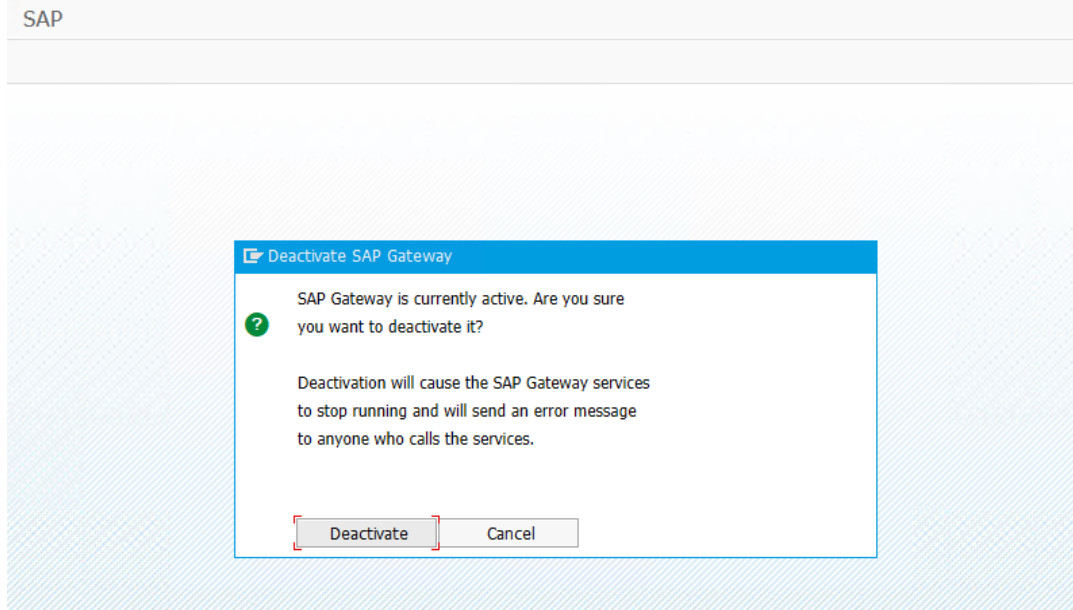

Activate SAP Gateway (in FES)

a. SPRO → UI Technologies → SAP FIORI → Initial Setup → Connection Setting → Activate SAP Gateway

OR

/n/IWFND/IWF_ACTIVATE

Shervil

If the Gateway is already activated, you will get the following screen
